

Facilitator: Olof Sjögren  
Participants: Oscar Sanner, Olof Sjögren, Alex Phu, Yenan Wang  
Location: Zoom  
Date: 2020-10-09

# Meeting Agenda

Group meeting for group GoAyo.

## §1 Objectives

- Catch up on the week's work.
- Start planning for next week.

## §2 Reports

- Yenan and Alex: User stories, US10 & US4 are completed. Good work on bugs and issues reported on GitHub. Scrapped some issues that turned out to be non-issues as well.
- Oscar and Olof: Refactored application to use BigDecimals instead of doubles. Made an EventBus to solve the observer issue. Also refactored all public classes in model to package private. Still working on the database, it turned out to be messy.

## §3 Discussion Items

- Next week's work structure?

## §4 Outcomes and Assignments

- Things that need to be done for next week:
  - More work on the database. If it's not completed until thursday, we'll scrap it and create a mock database.
  - Overlook all JDocs.
  - Write satisfactory tests so that we get the coverage we want.
  - Work on design/GUI, make it look good!
  - Squeeze out leftover bugs and refine the application.
- No more pair programming next week, everyone will pick off assignments to utilize efficiency.

## §5 End of Meeting

- Next meeting will be on Monday either at 9:00 or 10:00 and will be polled in the Slack group.
