

Facilitator: Oscar Sanner  
Participants: Gabriel Brattgård, Oscar Sanner, Olof Sjögren, Alex Phu, Yenan Wang  
Location: Campus Johanneberg  
Date: 2020-09-17

# Meeting Agenda

Group meeting for group GoAyo.

Due to various reasons, we will be proceeding today's meeting online.

## §1 Objectives

- Discuss problems which occurred during the week
- Discuss any questions we have to ask Pelle.

## §2 Reports

- 10/25 tasks have been completed or begun by the various teams.
- We have successfully integrated CircleCI with our git repository
- We are halfway through our first sprint and all members reports that the current rotating setup with two teams and one scrummaster works good.

## §3 Discussion Items

- Which conceptual responsibilities does each class in the model have?
- Will we have any sub-packages in the model?

## §4 Outcomes and Assignments

- Outcomes
  - Discussion with pelle:
    - User stories have to be related to the domain model. US16, US18 fails this. "As a developer can be fine tho, if it relates to the right model."
    - Try using generic types on observer-pattern.
    - The various data-interfaces are perfectly fine.
    - Throw specific exceptions. Let the controller handle, the others will just throw it up.
    - Separate gui and model functionality: let them communicate through a wall of assumed functionality to enable parallel development. For example a facade class as we have.

- We will drop all sup packages in model for this codesprint.
- Which conceptual responsibilities does each class in the model have?
  - We will code according the the UML and refactor as needed if needed in future codesprints.

## **§5 End of Meeting**

- Next meeting tomorrow 18/9.
  - Review this weeks codesprint
  - Decide rolls for next week.
